SECTION 1 SAFETY & GENERAL INFORMATION

1.1 Safety Symbols

The following symbols and signal words call your attention to instructions concerning your personal safety. Be sure to observe and follow these instructions.

The word **DANGER** indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING suggests a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION refers to potentially hazardous situations which, if not avoided, may result in minor or moderate injury to persons or equipment.

Warning stripes are placed on areas where a single decal would be insufficient. To avoid serious injury, keep out of the path of any equipment marked with warning stripes.

Read and observe all safety instructions before operating this equipment! Also read any additional manufacturer's manuals and observe any applicable safety instructions including dangers, warnings, and cautions.

Always be sure that all safety decals are clean and readable. Replace all damaged safety decals to prevent personal injury or damage to the equipment. Contact your local distributor, or call your Customer Service Representative to order more decals.

IMPORTANT! It is always the owner's responsibility to comply with all applicable federal, state and local laws, rules and regulations regarding the ownership, operation and towing of your Wood-Mizer sawmill. All Wood-Mizer mill owners are encouraged to become thoroughly familiar with these applicable laws and comply with them fully while using or towing the mill.

Always properly dispose of all sawing by-products, including sawdust and other debris, coolant, oil, fuel, oil filters and fuel filters.

1.2 Bed Extension Setup

WARNING! Securely fasten the legs of the bed extension to the ground before using the bed extension. Failure to do so will result in serious injury or death.

WARNING! Do not set up the mill on ground with more than a 10 degree incline. If setup on an incline is necessary, put blocks under one side of the mill or dig out areas for outrigger legs to keep mill level. Setting up the mill on an incline could cause it to tip over, resulting in serious personal injury.

1.3 Bed Extension Operation

IMPORTANT! This bed extension is designed and intended to work with the LT20, LT40 and LT70 series Wood-Mizer sawmills.

IMPORTANT! The operator should get adequate training in operation and adjustment of the sawmill.

DANGER! Make sure all guards and covers are in place and secured before operating or transporting the bed extension. Failure to do so may result in serious injury.

Be sure the blade housing and pulley covers are closed (i.e. the safety switches placed on these covers are engaged).

DANGER! Keep all persons out of the path of moving equipment and logs when operating the bed extension or loading and turning logs. Failure to do so may result in serious injury.

DANGER! Maintain a clean and clear path for all necessary movement around the mill and lumber stacking areas. Failure to do so may result in serious injury.

DANGER! Keep all persons out of the path of returning boards. Failure to do so may result in serious injury.

WARNING! Secure all loose clothing and jewellery before operating the sawmill. Failure to do so will result in serious injury or death.

WARNING! Always make sure log is clamped securely before sawing. Failure to do so will result in serious injury or death.

WARNING! Always leave loading arm halfway up while log is on sawmill bed. Failure to do so will result in serious injury or death.

WARNING! The automatic board return is intended to assist a second operator in removing boards quickly. Do not use the board return when operating the sawmill alone. Failure to do so will result in serious injury, death or damage to the equipment.

WARNING! Never use the board return table as a platform to stand on. This table is designed and intended to assist in the removal of boards only. Standing on the table may result in serious injury.

CAUTION! Be sure the pivot rails, turning arm, clamp, and toe boards are below bed level before loading a log onto the bed. Failure to do so may result in machine damage or cause misalignment.

CAUTION! Before loading a log, be sure the cutting head is moved far enough forward so the log does not hit it. Damage to the sawmill may result.

CAUTION! Be careful when manually lowering the log loader..Do not drop the loader onto the ground or perform any action which might break the velocity fuse valves on the loader cylinders.These valves control hydraulic flow and are necessary to prevent the loading arm from collapsing during use.

CAUTION! Do not try to force the saw head beyond its upper and lower travel limits. Damage to the up/down system may result.

CAUTION! Always make sure the up/down switch moves to the neutral or off position when released to ensure that the saw head stops moving. Damage to the sawmill may result.

CAUTION! Move the hydraulic clamp and turner to provide maximum ground clearance before transporting. Failure to do so may result in damage to the sawmill.

CAUTION! Be sure to stop the blade when returning the carriage. This will not only prevent the blade from being pulled off and ruined by a wood sliver, but also will increase the life of the blade.

1.4 Bed Extension Maintenance

CAUTION! Reinstall the track wiper so that it lightly touches the track rail. If the wiper presses too firmly against the rail, it can cause the power feed to bind.

CAUTION! Never use grease on the mast rails as it will collect sawdust.

CAUTION! Do not use chain lube. It causes sawdust buildup in chain links.

CAUTION! Do not overtension the chain. Damage to the feed motor may result.

CAUTION! Do not overtighten the set screws on the hydraulic valve assembly. Overtightening may cause the threads in the screw holes to strip.

CAUTION! Pressure should not exceed 2000 psi. Pressure above 2000 p.s.i. may damage the hydraulic hoses.

SECTION 2 INSTALLATION

The bed extension option includes a 6, 12 or 24-foot frame and the necessary hardware to attach it to your sawmill. After installation, the extension will allow you to cut longer logs than is possible with the standard sawmill. The bed extension is designed for operation with a stationary sawmill. A portable mill can be connected to the extension but will require 2 to 4 hours for each setup. The extension should be mounted to a firm, level footing. See [Form #359PL](#) located in the back of this manual for foot dimensions for each sawmill model and bed extension combination. Note the positions labeled A through E on each drawing. These positions will be referred to later for mounting the legs to the extension frame. Positions F, G, H and I apply to 24-foot extensions only.

2.1 Alignment Box Installation

1. Remove the feed chain from the tensioner bolt at the back end of the sawmill frame. Break apart the master link to disconnect the chain from the bolt.

CAUTION! When removing or replacing the feed chain on sawmills with hydraulic log handling, disconnect the negative battery lead. This will ensure the chain does not short the system if it contacts the power supply.

See Figure 2-1.

FIG. 2-1

2. Remove the bolts and lock nuts holding the feed chain tensioner to the sawmill frame. Remove the entire assembly from the sawmill frame. Use the same bolts and nuts to remount the tensioner assembly to the end of the extension frame.

3. Install the alignment link inside the end of the bed extension frame using the appropriate holes. Use four M10x115 hex head bolts and 10.5 flat washers to secure the box.

See Figure 2-2.

FIG. 2-2

2.2 Leg Installation

REMINDER: This section refers to positions A through E as labeled in [Form #359PL](#) located in the back of this manual.

1. Remove the rear leg (or outrigger) from position E on the sawmill frame. A support brace will be installed later that connects the extension frame to the sawmill frame. The removed sawmill leg will be repositioned on the support brace.

See Figure 2-3.

2. Use four M10 x 120 bolts and nylon lock nuts to secure a long leg at each position A and B on the extension frame. Insert the bolts from the outside of the frame tube and attach the nuts on the leg side of the tube.
3. **BX24 only:** Install a long leg at position H using four M10 x 25 bolts and nylon lock nuts.

FIG. 2-3

4. Use four M10 x 25 bolts and nylon lock nuts to mount a short leg at position C on the extension frame.

See Figure 2-4.

FIG. 2-4

2.3 Extension Frame Attachment

1. Position the extension frame at the end of the sawmill frame. Remove two bolts and nuts from the alignment link and loosen the jam nut. Turn the alignment link bolt counterclockwise to move the front plate towards as much as possible. Slide the extension frame over the alignment link on the sawmill frame. Sight down the length of the frames to see that they are lined up as close as possible.

See Figure 2-5.

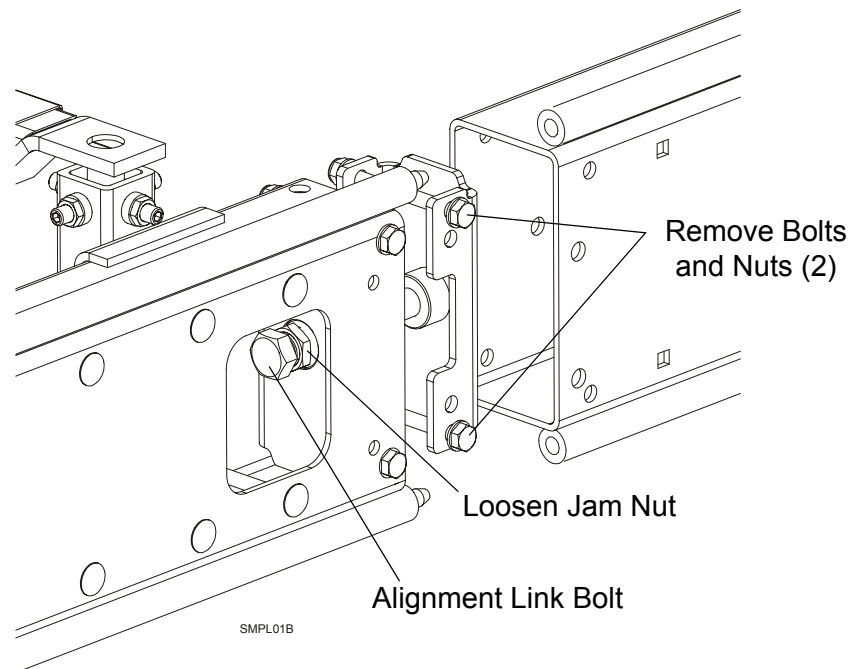

FIG. 2-5

2. Install two M10 X 115 hex head bolts in the holes together with four 10.5 flat washers. Secure the bolts with two M10-8 nylon lock hex nuts.

See Figure 2-6.

FIG. 2-6

3. Turn the alignment link bolt clockwise to tighten the bed extension and sawmill frame tubes.

See Figure 2-7.

FIG. 2-7

4. Be sure to tighten the alignment link jam nut against the box when the attachment procedure is complete.

2.4 Support Brace Installation

See **Table. 2-1**. A support brace is available to connect the bed extension and the sawmill. See the chart below to determine which brace you need for your configuration.

Bed Extension Support Brace Reference Table		
Sawmill Model	Bed-X	Brace Kit

TABLE. 2-1

1. Mount the support brace tube between the sawmill and extension frames at positions D and E. Use four M10 x 25 bolts and lock nuts to secure the brace at position D and E.

See **Figure 2-8**.

FIG. 2-8

2. Bolt the leg previously removed from the sawmill and a supplied short leg to the support brace tube with four M10 x 25 bolts and nylon lock nuts each.
3. Attach the supplied length of feed chain to the existing feed chain with the master link provided. Connect the feed chain to the tensioner bolt at the end of the extension frame. Adjust the tensioner so that the chain is positioned as indicated below. Make sure the feed chain is not twisted or kinked

See Table. 2-2. .

BX Model	Distance from top of top track rail to top of feed chain (measure at middle of chain span)
BX6	7 - 8 inches
BX12	8 - 9 inches
BX24	10 - 11 inches

TABLE. 2-2

2.5 Extra Leg and Bed Rail Installation (24-foot Bed Extensions Only)

1. The additional long leg should be mounted at position F shown in [Form #359PL](#). Use M10 x 120 bolts and lock nuts to secure the long leg to the main frame tube.

NOTE: When bolting near the end of the main tube, the tube can collapse or "mushroom" as the bolts are tightened. Do not overtighten the bolts to avoid deforming the main tube. If you find it difficult to align the tracks with the alignment set screws, check that neither frame tube is deformed. The tube can be pulled back into shape using the alignment set screws.

See Figure 2-9.

FIG. 2-9

2. Mount the additional bed rail assembly and short leg at position G on the support brace tube. Use bolts and lock nuts to mount the short leg and bed rail to the support brace tube. Use M10 x 120 bolts and lock nuts to mount the other end of the bed rail to the main tube.

3. Mount two middle short legs at position I shown in [Form #359PL](#). Use four M12 X 30 hex head bolts.

SECTION 3 BED EXTENSION ALIGNMENT

1. Use the six set screws around the extension frame tube to align the upper and lower tracks on the sawmill to the tracks on the extension. You should not be able to detect any variance where one track ends and the other starts.
2. Move the cutting head across the area where the sawmill frame and extension meet. If the tracks are properly aligned, you should not be able to tell when the track bearings cross from the sawmill to the extension. Any variance will cause inaccurately sawn boards! Fine tune the set screws until the sawmill and extension tracks are perfectly matched.

NOTE: Bolting through the main tube can cause the tube to collapse or "mushroom". If you find it difficult to align the tracks with the alignment set screws, check that neither frame tube is deformed. The tube can be pulled back into shape using the alignment set screws.

3. Place two equal height objects on top of the track rail (wrench sockets work well). Pull a string tight over the objects and clamp so there is no sag in the string. Measure from the string to the track at one end, the middle, and the other end of the track. The track should be 1/16 to 1/8" (1.5 to 3.0 mm) higher in the middle than at the ends. This will compensate for any sag that occurs as the cutting head reaches the middle of the track. If more bow in the middle is needed, shim the middle track-mounted legs. If the middle is bowed up too much, shim the track-mounted legs at each end of the frame. Shim under any feet that do not touch the ground.
4. Align the sawmill and extension as instructed in your sawmill manual.

SECTION 4 LOG CLAMP OPERATION

A manual log clamp is supplied with the bed extension to help clamp long logs against the side supports.

1. Insert the log clamp post in the slotted channel between the middle bed rails of the extension. Choose a hole close to the log.
2. Pull the clamp handle to spin the cam against the log and clamp the log firmly against the side supports.
3. Lock the clamp in place with the chain mounted to the extension frame. Stretch the chain up to the clamp and slip the chain through the slot on the clamp handle. Use a link in the chain that holds the clamp firmly against the log.

SECTION 5 STORAGE PROTECTION

When not using the bed extension, follow the recommendations below to prevent rust and/or corrosion.

1. Coat the top and bottom bed extension rails with a rust inhibitor such as Sherwin-Williams P.D.R.P. #710.
2. Coat the power feed chain with a light film of a light-weight lubricant such as Dexron III ATF. Make sure the connecting link is attached to the chain to prevent chain loss.
3. Coat the threads of the bed rail leveling bolts with a dry lube such as Gunk L-508.
4. Lubricate the pivot block/shaft on the pivot bed rails with NLGI No. 2 grade lithium grease such as Amoco Rycon #2 Synthetic Grease.

Preparation For Use

Before using a bed extension that has been stored in the above manner, remove the rust inhibitor protection coat from the bed extension rails. Use a clean, dry cloth and a light lubricant such as WD-40 to remove the protection coat.
