SECTION 1 SAFETY & GENERAL INFORMATION

This symbol calls your attention to instructions concerning your personal safety. Be sure to observe and follow these instructions. This symbol accompanies a signal word. The word **DANGER** indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. **WARNING** suggests a potentially hazardous situation which, if not avoided, could result in death or serious injury. **CAUTION** refers to potentially hazardous situations which, if not avoided, may result in minor or moderate injury to persons or equipment. Read all safety instructions before operating this equipment and observe all safety warnings!

1.1 Installation and Maintenance

DANGER! On electric mills, hazardous voltage inside the disconnect box, starter box, and at the electric motor can cause shock, burns, or death. Disconnect and lock out power supply before performing debarker installation! Follow all applicable electrical codes.

DANGER! On gas/diesel mills, before performing any service to this equipment, turn the key to the OFF position, remove the key, and disconnect the sawmill battery ground terminal. Failure to do so will result in serious injury or death.

DANGER! Make sure all electrical installation, service and/or maintenance work is performed by a qualified electrician and is in accordance with applicable electrical codes. Failure to do so will result in serious injury or death.

WARNING! Before replacing the debarker blade, move the sawmill blade guide arm in front of the sawmill blade to cover the blade teeth. Failure to do so may result in serious injury or death.

1.2 Operation and Towing

DANGER! Make sure all guards and covers are in place and secured before operating the debarker option. Failure to do so may result in serious injury.

DANGER! Keep all persons out of the path of moving equipment when operating the debarker. Failure to do so will result in serious injury.

DANGER! Always remove the key from the control panel before preparing the debarker for towing. Failure to do so may result in serious injury.

WARNING! If the debarker continues to run with the key switch in the OFF position, remove the negative battery terminal from the battery post.

DO NOT continue to operate the mill if the main key switch does not control debarker operation. Doing so could result in serious injury. Call Wood-Mizer customer service for more information.

See Table 1-1. Pictogram decals used to warn and inform the user about danger in the LT15/20 Debarker.

TABLE 1-1

Decal View	W-M No.	Description
	101216	CAUTION! Read thoroughly the manual before operating the machine. Observe all safety instructions and rules when operating the sawmill.
	101217	CAUTION! Keep away from debarker blade!
	101218	CAUTION! Disconnect power supply before servicing the debarker.
	S20097	Debarker Motor Rotation Direction
<p style="text-align: center;">a b c</p> 	100582	a. Debarker On/Off (option) b. Starting motor c. Debarker In/Out (option)

SECTION 2 DEBARKER INSTALLATION ON THE LT15 SAWMILLS

DANGER! On electric mills, hazardous voltage inside the disconnect box, starter box, and at the electric motor can cause shock, burns, or death. Disconnect and lock out power supply before performing debarker installation! Follow all applicable electrical codes.

The Debarker Option may be installed to the LT15 sawmills with production date 21.06.2007 and later.

2.1 Debarker Frame Mounting Holes

IMPORTANT! Sawmills are equipped with pre-drilled debarker mounting holes. **Verify hole locations before beginning Debarker installation. Proper hole location is imperative for safe and effective Debarker operation.**

2.2 Debarker Installation

1. Open the blade housing cover. Remove the hole plugs from the sawmill saw head.

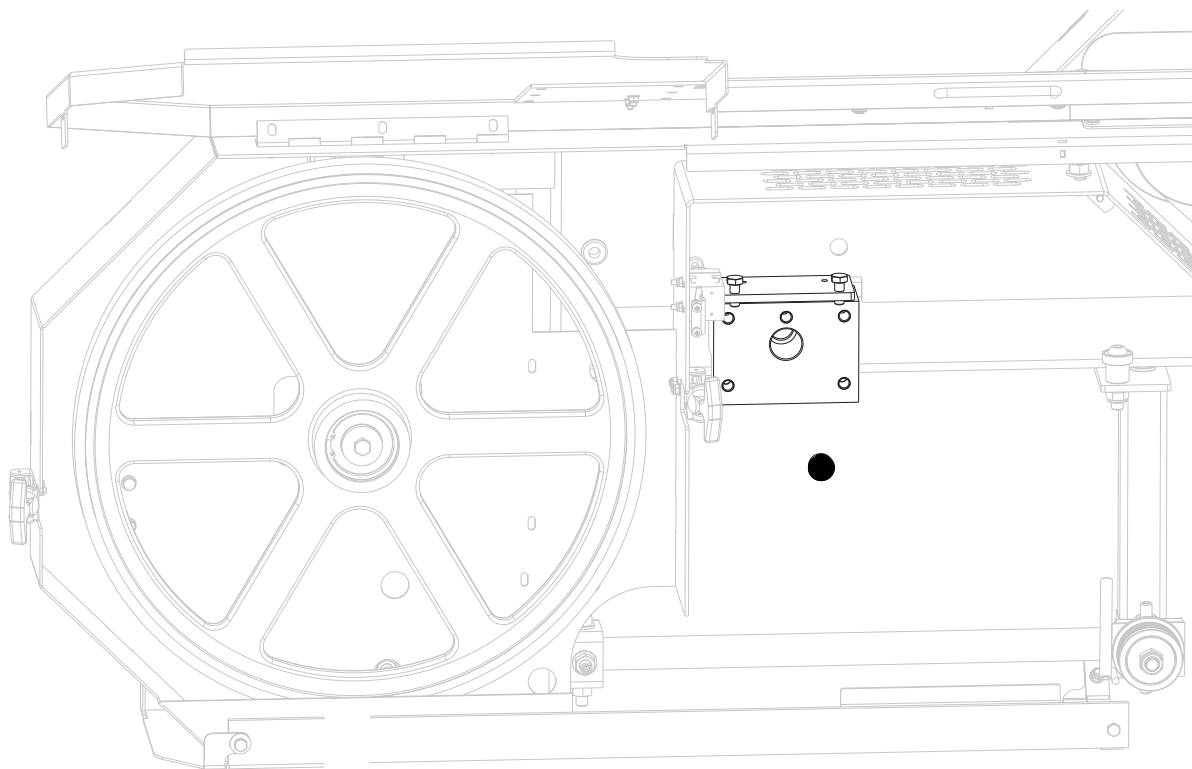

FIG. 2-1

2 Debarker installation on the LT15 sawmills

Debarker Installation

2. Assemble the debarker to the sawmill saw head. Align the debarker arm holes and the holes in the saw head. Route the debarker wire harness through the protective conduit and next through the saw head tube to the electric box and next through the saw head hole and debarker arm.

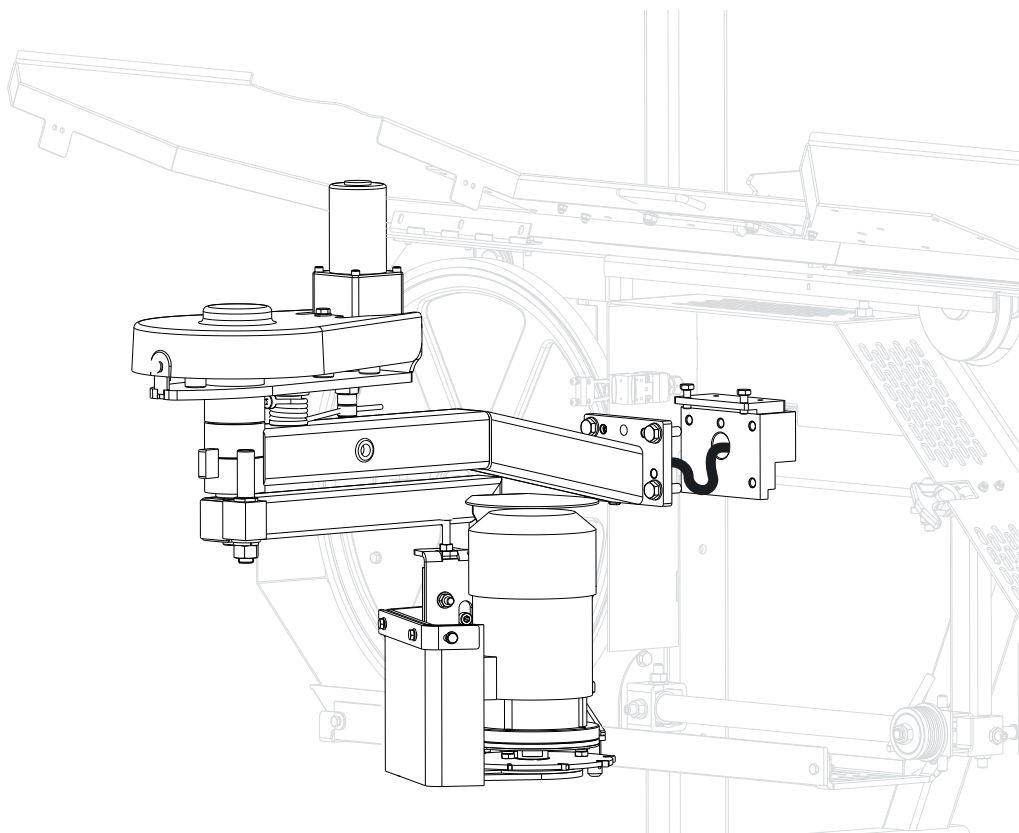

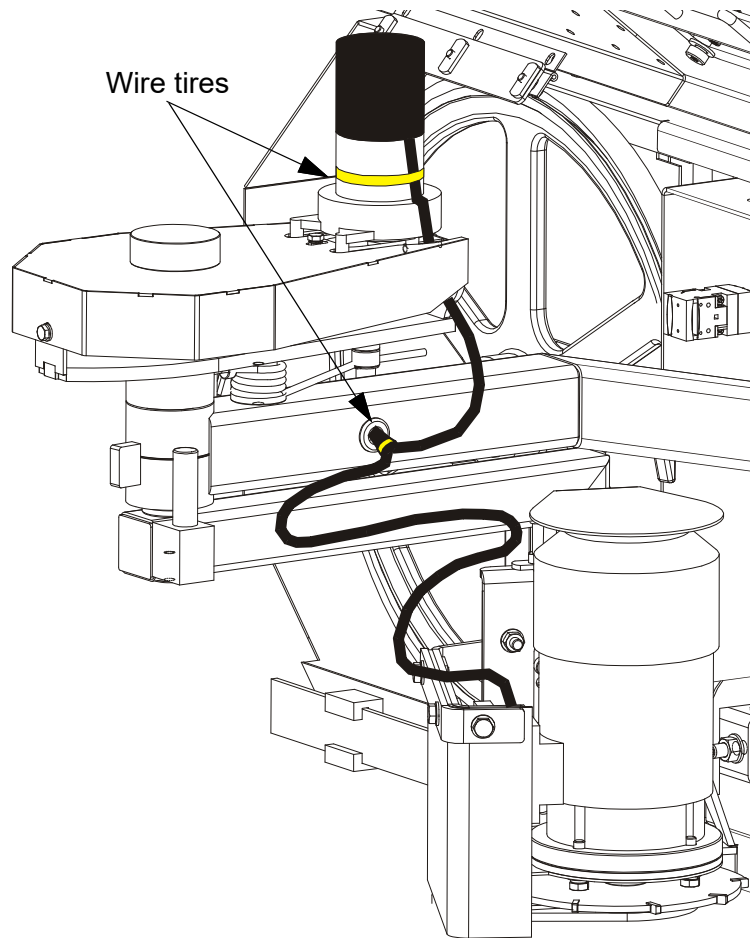

FIG. 2-2

3. Take out the wire harness from the debarker arm. Slide the debarker motor harness through one of the supplied harness clamps. Secure the wires with wire ties.

See figure 2-3.

150204

FIG. 2-3

2.3 Wiring Instructions

DANGER! On electric mills, hazardous voltage inside the disconnect box, starter box, and at the electric motor can cause shock, burns, or death. Disconnect and lock out power! Follow all applicable electrical codes.

IMPORTANT! Avoid pinch and pivot points, unnecessary wire bending and open spaces where the wire could get caught by a log, etc. If you have any questions, call Wood-Mizer customer service.

IMPORTANT! Make sure that the ring terminals do not touch the motor body.

2.4 Control Component Installation

DANGER! On electric mills, hazardous voltage inside the disconnect box, starter box, and at the electric motor can cause shock, burns, or death. Disconnect and lock out power! Follow all applicable electrical codes.

1. Remove the front panel (leave wire connections) from the control box.
2. Using the back side of the front panel for a guideline, cut out holes in the front panel lexan decal for the debarker switches. Install the provided debarker on/off switch, in/out switch, nylon washer, and rubber boot in place as shown.

See figure 2-4.

FIG. 2-4

2 Debarker installation on the LT15 sawmills

Control Component Installation

See figure 2-5. LT15AC Control Panel Debarker Wires Connection.

FIG. 2-5

NOTE: If the debarker arm movement direction is not appropriate (for e.g. the arm moves out when the switch is switched left), interchange the 9 and 10 wires connection.

3. Reinstall the front panel.

4. Connect the double conductor to debarker arm motor.

Number of wire from the electric box	Colour of wire from debarker arm motor
1	red
2	black

TABLE 2-1

FIG. 2-5

5. Connect motor power cord to the terminals, wires no 1,2,3 (viewed from the top).

FIG. 2-5

2 Debarker installation on the LT15 sawmills

Alignment

2.5 Alignment

The debarker blade should remain parallel to the sawmill blade throughout the debarker's range of motion.

1. Turn the key to ON and use the debarker in/out switch to move the debarker all the way in. Turn the key to OFF (0) and remove the key. This will prevent the debarker from being turned on while performing alignment procedures.
2. Clip the blade guide alignment tool to the sawmill blade. Make sure the tool lies flat on the blade and does not contact a tooth that could cause it to angle.

See figure 2-6.

FIG. 2-6

3. Check the height of the debarker blade against the alignment tool. The bottom edge of the tool should align with the center of the debarker blade.

To adjust the blade up or down, loosen the four blade motor mount bolts. Loosen the jam nuts on the adjustment bolts. Turn the adjustment bolts clockwise to push the motor and blade down. Turn the adjustment bolts counterclockwise and slide the motor up to raise the motor and blade. Retighten the jam nuts on the adjustment bolt and four motor mount bolts

NOTE: If the adjusting range is insufficient, unscrew the positioning bolts and change the adjustment assembly position.

4. Insert the key and use the debarker in/out switch to move the debarker all the way out. Turn the key to OFF (0) and remove the key.
5. Move the blade guide alignment tool on the sawmill blade and check the position of the debarker blade against the tool. If the debarker blade is not centered with the tool, you will need to adjust the debarker mount.

2 Debarker installation on the LT15 sawmills

Debarker arm adjustment

2.6 Debarker arm adjustment

In order to provide proper operation of the debarker, its blade should remain parallel to the sawmill blade throughout the debarker's range of motion.

1. Loosen the mounting bolts (A).
2. Adjust the debarker arm in the vertical plane using the hex screws (B).
3. Lightly tighten screws (A), and then adjust the tilt of the debarker using bolts (C). The bolt (D) is the pivot point of the debarker.
4. After completing the adjustment, tighten the mounting bolts (A).

See figure 2-7.

FIG. 2-7

SECTION 3 OPERATION AND MAINTENANCE

3.1 Locking Pin Operation

See Figure 3-1. The debarker is equipped with a locking pin located on the debarker arm. Two hole locations are provided for the locking pin.

Before operating the debarker, make sure the locking pin is removed. Turn the key switch to OFF (0) and remove the key. Pull the debarker out to relieve pressure on the locking pin. Pull down split cotter. Remove the locking pin.

Before towing the sawmill, lock the debarker in the travel position. Turn the key switch to OFF (0) and remove the key. Manually move the debarker arm to align the holes. Insert the locking pin and secure with the split cotter.

FIG. 3-1

3.2 Operation

The Debarker Option allows you to remove bark from logs before cutting.

DANGER! Make sure all guards and covers are in place and secured before operating the debarker option. Failure to do so may result in serious injury.

DANGER! Keep all persons out of the path of moving equipment when operating the debarker. Failure to do so will result in serious injury.

1. Use the in/out switch on the control box to pivot the debarker all the way out.
2. Move the sawmill saw head forward and pivot the debarker in until the front fence engages with the end/side of the log. Continue to pivot the debarker in until the spring arm is half loaded.
3. Turn the debarker on/off switch to ON (1).
4. Proceed with cutting. The spring will keep the debarker against the side of the log.

NOTE: The debarker can continuously remove up to approximately 2cm of material from the log; no motor cool down time is required. Slower feed rates may be required for optimal debarker operation.

5. Once the saw head is past the end of the log, pivot the debarker away from the log. Return the saw head.
6. When done sawing and ready to store or transport the sawmill, place the debarker in its travel position before towing the sawmill ([See Section 3.1](#)).

3.3 Maintenance

DANGER! Before performing any service to this equipment, turn the key to the OFF (0) position and remove the key. Failure to do so will result in serious injury or death.

1. Periodically check the flexible guard. Adjust the guard up or down so the bottom is even with the bottom of the debarker blade. Replace the guard as needed.
2. Periodically check the debarker blade. Align or replace as needed.

WARNING! Before replacing the debarker blade, move the sawmill blade guide arm in front of the sawmill blade to cover the blade teeth. Failure to do so may result in serious injury or death.

To replace the debarker blade, remove the lower blade guard plate.

Place one wrench on the blade arbor, above the blade bearing. Place the other wrench on the lower bolt and rotate counter-clockwise. Remove the bolt and washer. Remove the blade and spacer. Reinstall the spacer with the new blade. Reinstall the bolt and washer and turn clockwise to tighten. Reinstall the blade guard plate.

Unscrew the three mounting bolts. Remove the bushing and the blade. Reinstall the bushing with the new blade. Reinstall the bolt and washer. Reinstall the blade guard plate.

3

Operation and Maintenance

Maintenance

 **WARNING!** Adjusting the belt and spring tension (described below) is very important. Failure to do it properly will result in damage to the debarker blade motor.

3. Once a week check belt for tension and wear. Adjust or replace as necessary. To tighten the belt, turn the key switch to OFF (0) and remove the key. Remove the belt guard and loosen the four motor mount screws. Turn the adjustment nut clockwise to move the motor out and tighten the belt. The belt should be tensioned to allow 6-7mm deflection measured halfway between the pulleys with 2 kg force. Retighten the motor mount screws and replace the belt guard.

See Figure 3-2.

FIG. 3-2

4. Once a week and after each spring replacing, check the spring tension. Use the in/out switch to pivot the debarker all the way in. Turn the key switch to OFF (0) and remove the key. Pull the debarker arm. The spring should be tensioned to allow to move the debarker arm halfway with 4,5 kg force. Adjust the spring tension if necessary.

See Figure 3-3.

FIG. 3-3

3

Operation and Maintenance

Maintenance

5. Once a week check the braking time. The time from switching off the debarker blade till the moment when the blade is completely stopped should be no longer than 10 seconds.

If this time is longer than 10 seconds, loosen the locking nut and turn right the braking pin adjustment screw by 360°. Tighten the locking nut. Recheck the braking time.

See Figure 3-4.

FIG. 3-4

WARNING! The braking pin must be adjusted as described. Failure to do so may result in serious injury.

If the braking pin is worn or the spring is damaged, it is necessary to replace it ([See Section 4.3](#) for part numbers).

To replace the braking pin and/or spring with a new one, dismount the blade guard. Replace the safety pin and/or spring with a new one. Loosen the locking nut and turn the adjustment screw left or right so that the braking pin protrudes about 8mm - see the figure below.

SECTION 4 DEBARKER PARTS

4.1 How To Use The Parts List

- Use the table of contents or index to locate the assembly that contains the part you need.
- Go to the appropriate section and locate the part in the illustration.
- Use the number pointing to the part to locate the correct part number and description in the table.
- Parts shown indented under another part are included with that part.
- Parts marked with a diamond (◆) are only available in the assembly listed above the part.

See the sample table below. Sample Part #A01111 includes part F02222-2 and subassembly A03333. Subassembly A03333 includes part S04444-4 and subassembly K05555. The diamond (◆) indicates that S04444-4 is not available except in subassembly A03333. Subassembly K05555 includes parts M06666 and F07777-77. The diamond (◆) indicates M06666 is not available except in subassembly K05555.

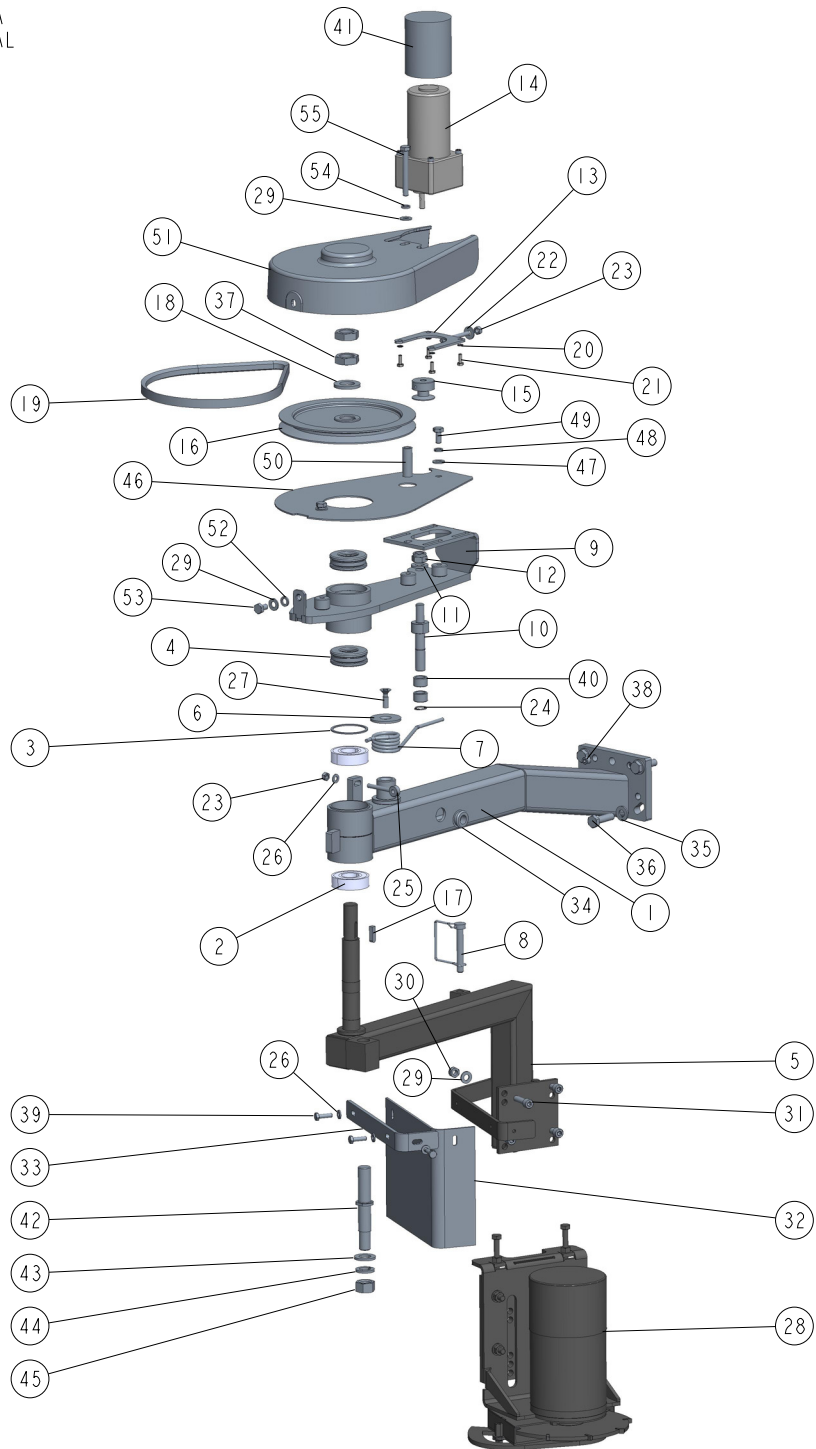

4.2 Sample Assembly				
REF	DESCRIPTION (◆ Indicates Parts Available In Assemblies Only)	PART #	QTY.	
	SAMPLE ASSEMBLY, COMPLETE (INCLUDES ALL INDENTED PARTS BELOW)	A01111	1	
1	Sample Part	F02222-22	1	
	Sample Subassembly (Includes All Indented Parts Below)	A03333	1	
2	Sample Part (◆ Indicates Part Is Only Available With A03333)	S04444-4	1	◆
	Sample Subassembly (Includes All Indented Parts Below)	K05555	1	
3	Sample Part (◆ Indicates Part Is Only Available With K05555)	M06666	2	◆
4	Sample Part	F07777-77	1	

To Order Parts:

- From Europe call our European Headquarters and Manufacturing Facility in Kolo, Poland at **+48-63-2626000** or **+48-3912-1319**. From the continental U.S., call **1-800-448-7881** to order parts. Have your customer number, vehicle identification number, and part numbers ready when you call.
- From other international locations, contact the Wood-Mizer distributor in your area for parts.
