## SECTION 1 SAFETY

### 1.1 Safety Symbols

The following symbols and signal words call your attention to instructions concerning your personal safety. Be sure to observe and follow these instructions.

**DANGER!** indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

**WARNING!** suggests a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION!** refers to potentially hazardous situations which, if not avoided, may result in minor or moderate injury or damage to equipment.

**IMPORTANT!** indicates vital information.

**NOTE:** gives helpful information.

Warning stripes are placed on areas where a single decal would be insufficient. To avoid serious injury, keep out of the path of any equipment marked with warning stripes.

## 1.2 Safety Instructions

**NOTE:** ONLY safety instructions regarding personal injury are listed in this section. Caution statements regarding only equipment damage appear where applicable throughout the manual.

### OBSERVE SAFETY INSTRUCTIONS

**IMPORTANT!** Read the entire Operator's Manual before operating the Merry-Go-Round (MGR) handling system. Take notice of all safety warnings throughout this manual and those posted on the machine. Keep this manual with this machine at all times, regardless of ownership.

Also read any additional manufacturer's manuals and observe any applicable safety instructions including dangers, warnings, and cautions.

Only persons who have read and understood the entire operator's manual should operate the Merry-Go-Round (MGR) handling system. The Merry-Go-Round (MGR) handling system is not intended for use by or around children.

**IMPORTANT!** It is always the owner's responsibility to comply with all applicable federal, state and local laws, rules and regulations regarding the ownership, operation of your Wood-Mizer products. All Wood-Mizer product owners are encouraged to become thoroughly familiar with these applicable laws and comply with them fully while using the machine.

**IMPORTANT!** The Resaw with MGR Handling System is intended for sawing wood only. The resaw must not be used for other purposes such as cutting ice, metal or any other materials. See Section 6 "Specification" of the HR500/HR700 Resaw manual for log size capacities of the machine.

**IMPORTANT!** The operator of the resaw should get adequate training in the operation and adjustment of the machine.

#### **KEEP MERRY-GO-ROUND (MGR) HANDLING SYSTEM AND AREA AROUND MERRY-GO-ROUND (MGR) HANDLING SYSTEM CLEAN**

**DANGER!** Maintain a clean and clear path for all necessary movement around the machine and lumber stacking areas. Failure to do so will result in serious injury.

#### **CAUTIONS FOR MERRY-GO-ROUND (MGR) HANDLING SYSTEM SETUP**

**WARNING!** Securely fasten the feet of the Merry-Go-Round (MGR) handling system to the floor before operating the machine. Failure to do so may result in serious injury or death.

#### **CHECK MERRY-GO-ROUND (MGR) HANDLING SYSTEM BEFORE OPERATION**

**DANGER!** Make sure all guards and covers are in place and secured before operating the Merry-Go-Round (MGR) handling system. Failure to do so may result in serious injury.

#### **KEEP PERSONS AWAY**

**WARNING!** Keep all persons out of the path of moving equipment and boards while operating Merry-Go-Round

# 1

## Safety *Safety Instructions*

---

(MGR) handling system. Failure to do so may result in serious injury or death.

### USE PROPER PROCEDURE WHEN CONDUCTING ELECTRICAL SAFETY CHECKS AND MAINTENANCE

**DANGER!** Make sure all electrical installation, service and/or maintenance work is performed by a qualified electrician and is in accordance with applicable electrical codes.

**WARNING!** Consider all electrical circuits energized and dangerous.

**WARNING!** Never assume or take the word of another person that the power is off; check it out and lock it out.

**WARNING!** Do not wear rings, watches, or other jewelry while working around an open electrical circuit.

**DANGER!** Never operate the electric box switches when the MGR handling system is running.

## SECTION 2 OPERATION

### 2.1 Overview

**See Figure 2-1.** The Merry-Go-Round (MGR) handling system is designed to return unfinished cants to the feed end of the HR500/HR700 Resaw. The system consists of two transfer tables and a return track. The standard length of each transfer table is 3,3m (10.8 ft). As cants exit the Resaw they feed onto the kicker table.

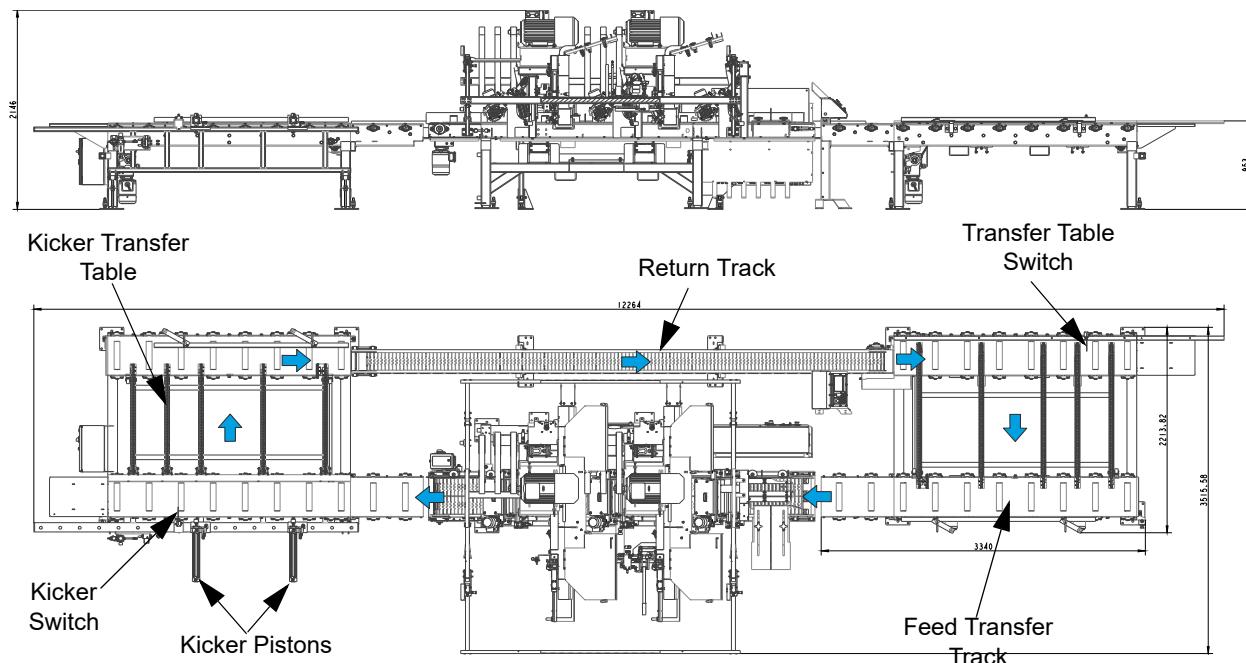

FIG. 2-1

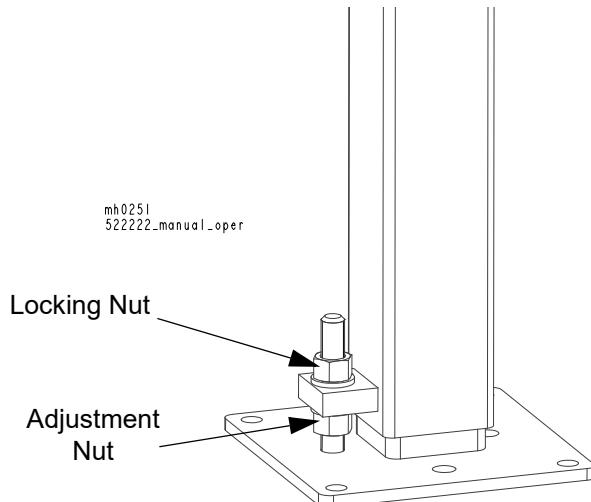

The table is adjusted so that cants of a specific height engage the kicker switch. Finished material moves under the kicker switch and can be off-loaded. If a cant engages the kicker switch, two air-driven pistons "kick" the cant onto the transfer chains. The cant is then routed to the return track back to the transfer table at the feed end of the Resaw.

The cant activates a second switch which causes the transfer table to rise, transferring the cant from the return track to the feed table. Transfer chains then move the cant forward where it can then be reloaded onto the Resaw feed track.

## 2.2 Merry-Go-Round Setup

See Figure 2-2.

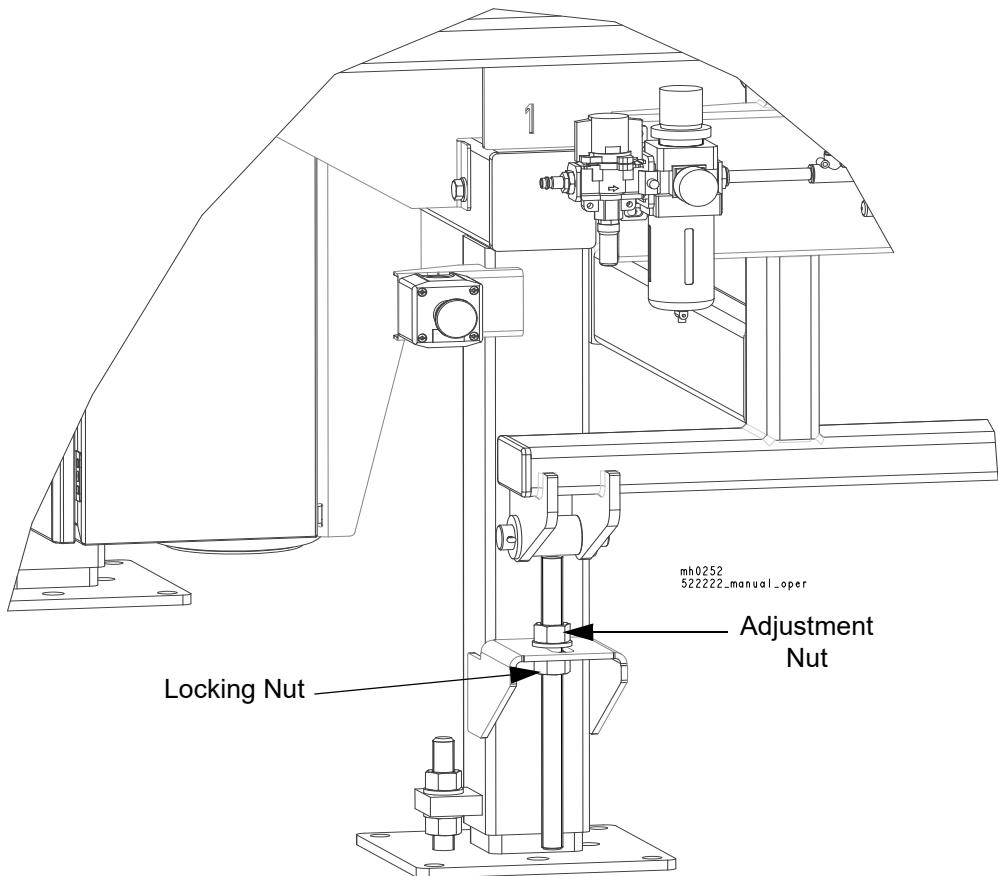

1. Each merry-go-round (MGR) table has leg adjustments to help align the tables parallel to the Resaw. Loosen the locking nut and turn the adjusting nut to raise or lower the leg. Sight down the table edge to determine if the table is aligned with the Resaw feed track. Re-tighten the locking bolt to maintain the adjustment.

**FIG. 2-2**

**See Figure 2-3.**

2. Adjust the kicker table so that the desired height can contact the kicker switch. Loosen the locking nut and turn the adjustment nut to raise or lower the kicker table. Re-tighten the jam nut to maintain adjustment.

**FIG. 2-3**

# 1

## Operation Merry-Go-Round Setup

See Figure 2-4.

3. Adjust kickers to a position that both will contact the cant. Different length cants will require readjustment of the rear kicker.

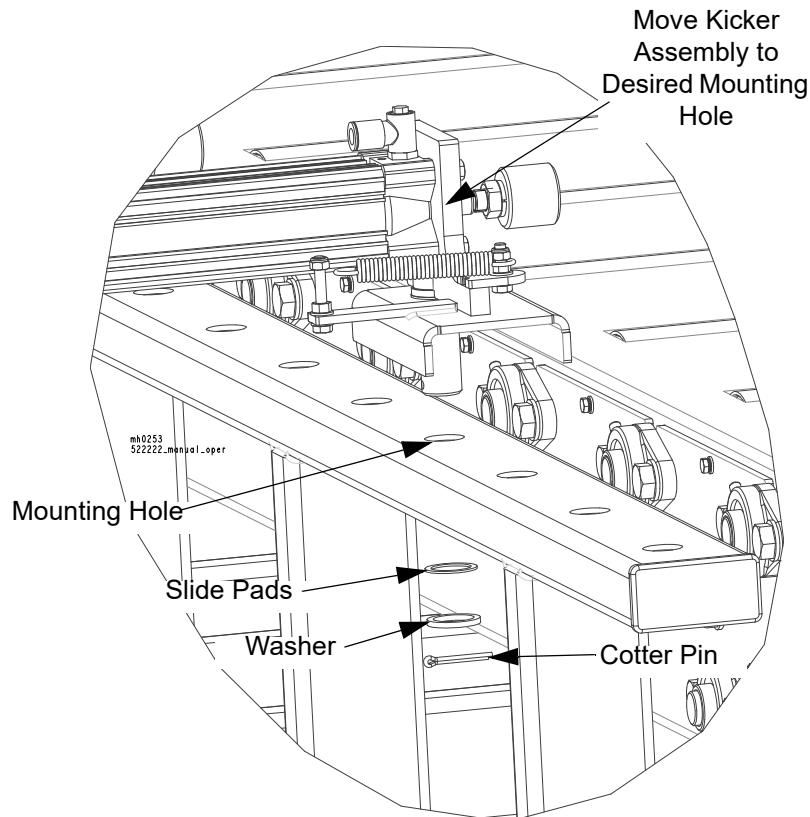

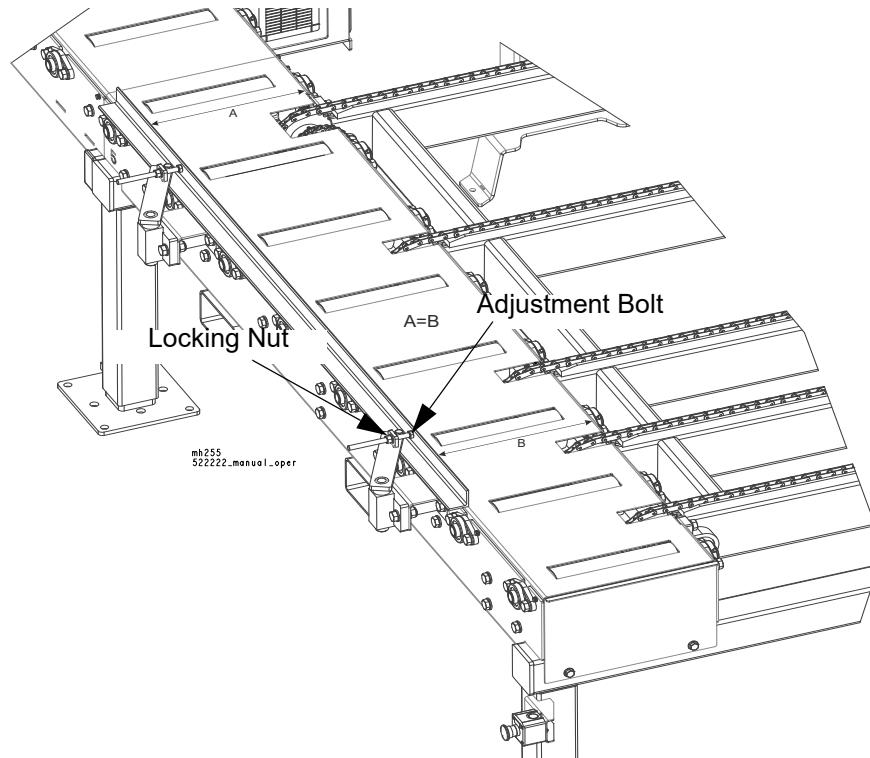

FIG. 2-4

**See Figure 2-5.**

4. Loosen the jam nuts and adjust the stop bolts on the return track fence so the fence opens to 6-7mm (1/4") more than the cant width to be cut. Re-tighten the jam nuts. Be sure the fence is parallel to the table.

**FIG. 2-5**

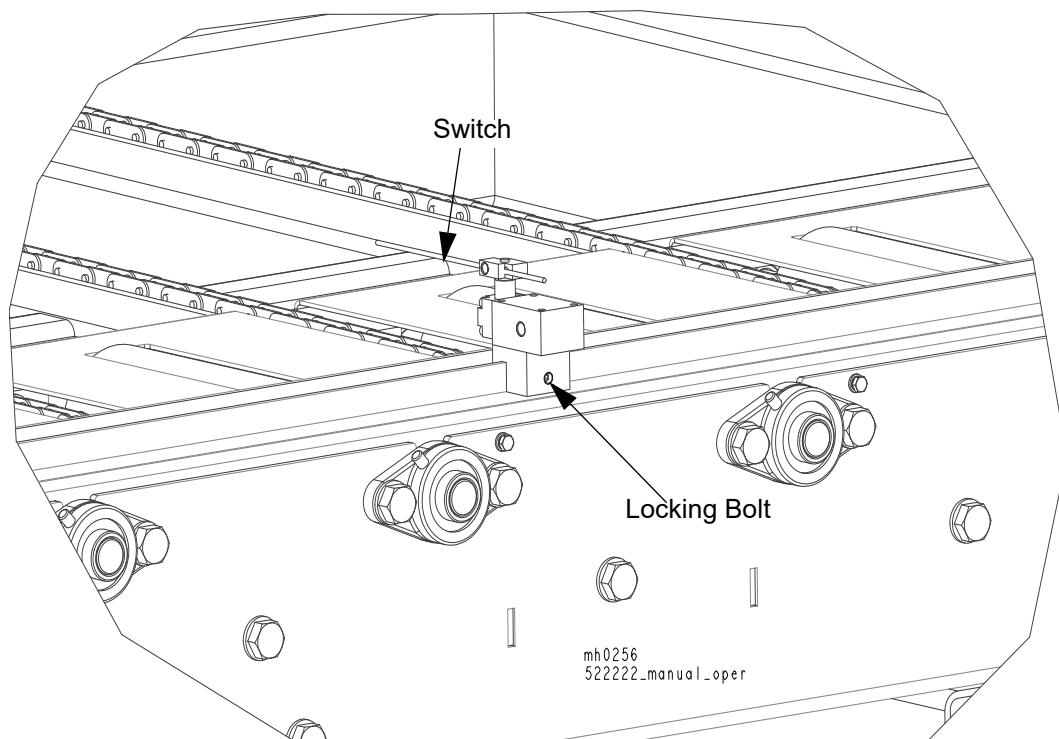

# 1

## Operation

### Merry-Go-Round Setup

See Figure 2-6.

5. Adjust the transfer table air switch so that the end of the cant contacts the switch once it has completely moved from the return track to the transfer table.

**FIG. 2-6**

## 2.3 Merry-Go-Round Air System

The MGR air system consists of two valve assemblies; one operates the kickers and one operates the transfer table. The kicker assembly also includes a solenoid valve and an air restriction valve to control the speed of the kickers. The kicker valves are factory set and should not be changed.

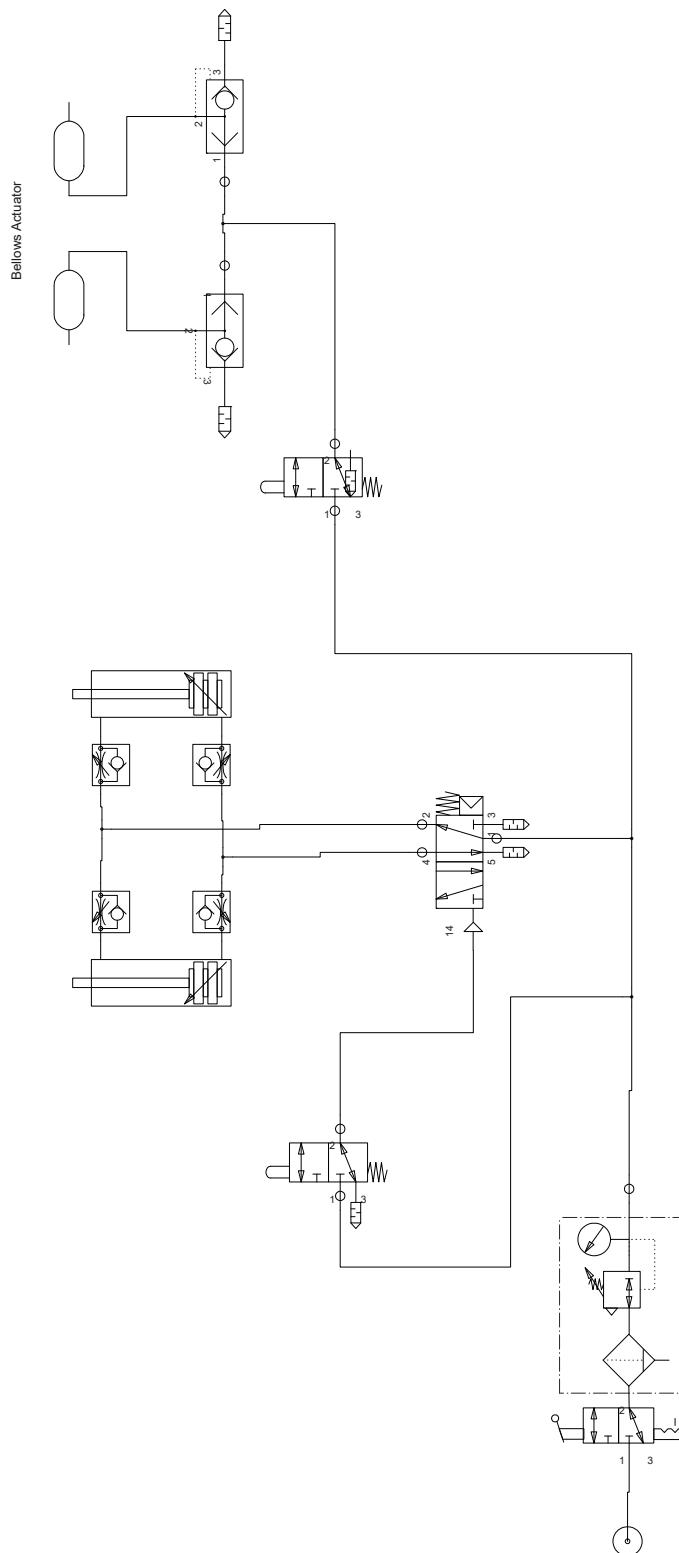

**See Figure 2-7.** The air supply connection is shown In the figure below, it is shown attached to the kicker valve assembly. To properly connect the air system:

1. Use a 1/2" NPT female fitting to connect the air line to the connection fitting.
2. Raise the shutoff valve handle on air valve assembly.
3. Turn regulator valves until the gauge indicates 0,6 MPa (87 PSI) Turning the valve clockwise raises the air pressure; counterclockwise lowers the air pressure.
4. Activate the kicker switch and check if the kicker pistons operate properly.
